A1: At this time, all funding is being provided by CCU funds. No outside funding is anticipated.

Also, does the reference list have to match the project experience writeups provided as part of Section VI. PRESENT EXAMPLES OF RECENTLY ACCOMPLISHED SIMILAR PROJECTS?

Q5: Would the County consider extending the deadline?

Insurance Review – Insurance requirements are subject to periodic review by the County. The Risk Manager or designee is authorized, but not required, to reduce, waive, or suspend any insurance requirements whenever Risk Management determines that any of the required insurance is not available, is unreasonably priced or is not needed to protect the interests of the County. In addition, if Risk Management determines that heretofore, unreasonably or unavailable types of insurance coverage or coverage limits become reasonably priced or available, the Risk Manager or designee is authorized, but not required, to change the above insurance requirements to require additional types of insurance coverage or higher coverage limits, provided that any such change is reasonable in light of past claims against the County, inflation, or any other item reasonably related to the

County's risk. Any change requiring additional types of insurance coverage or higher coverage limits must be made by amendment to this contract. Contractor agrees to execute any such amendment within thirty (30) days of receipt.

Any failure, actual, or alleged, on part of the County to monitor or enforce compliance with any of the insurance and indemnification requirements will not be deemed as a waiver of any rights on the part to the County.

Section 1324a [Section 274A of the Immigration and Nationality Act ("INA")]. The County shall consider employment by any Contractor of unauthorized aliens a violation of Section 274A of the INA. RP-21 BACKGROUND: Charlotte County Board of County Commissioners through Charlotte CCU is responsible for the wastewater services provided to the communities within its certificated area. Throughout the area, some lift stations are in need of rehabilitation due to age and growth in population (see exhibit #1). Some lift stations are currently located in the rights-of-way, along drainage swales and in the front yard of developed properties. Others are located in easements on privately owned or county - owned property. The location of the existing lift stations at these sites is not conducive to good design practice, does not meet the established standard specifications, prevents the installation of needed equipment and does not allow maintenance vehicles easy access to conduct needed work. The project includes the design of new lift stations and demolition of the existing lift stations, including relocation of the lift station site.

1. **LS#1 Community Center** constructed in the 1970's (see exhibit #2) (Complete replacement), this is a suction lift pump station located alongside a roadway and parking lot in a small building. Recommend converting it to a duplex submersible pump station. The existing wet well can be converted to a manhole with a new wet well as was done for LS#2 Dalton. If the easement is an issue the existing wet well can be converted for submersible pumps. This station does not require a stationary generator. The lift station collects wastewater from approximately 300 residences and pumps the wastewater to the East Port Wastewater Treatment Facility.
2. **LS#7 Pure Oil**, constructed in the 1970's (see exhibit #3) (Relocate/Complete Replacement), this is a suction lift pump

station in a small building in an undersized easement hindering access and placement of a stationary generator as required by FDEP Rule 62-604.400 Design/Performance Considerations. This station receives flow from a satellite station. It is located behind a gas station and alongside a residential property. There are any no CCU owned properties nearby so potential sites for relocation need to be looked at. There is a small open area south of the gas station alongside a canal that could be considered. Recommend converting to a duplex submersible station. The existing wet well should be converted to a manhole. The lift station collects wastewater from approximately 261 residences and 11 commercial businesses and pumps the wastewater to the East Port Wastewater Treatment Facility.

3. **LS#303 Constantine**, constructed in the 1980's (see exhibit #4) (Relocate/Complete Replacement to CCU owned Property nearby). This is a simplex submersible station located in the center of a roadway intersection. A new duplex submersible station should be installed with wet well on the county-owned lot. The wet well in the roadway to be converted to a manhole. This station does receive flow from one satellite station and will require a stationary generator per FDEP Rule 62-604.400 Design/Performance Considerations. The lift station collects wastewater from approximately 91 residences and pumps the wastewater to the East Port Wastewater Treatment Facility.
4. **LS#816 Boulevard West**, constructed in the 1980's (see exhibit #5) – (Relocate/Complete Replacement to CCU owned Property nearby) This is a submersible station located in an undersized easement alongside a roadway hindering access and placement for a stationary generator required by FDEP Rule 62-604.400 Design/Performance Considerations. This is a master lift station currently receiving flow from more than 10 satellite stations. There are six (6) additional stations that can be routed to this station if needed. A new duplex submersible station should be installed on the county-owned lot located nearby. This station handles a large area, and hydraulic modeling should be used to correctly determine the flow rates needed to specify the components. The lift station collects wastewater from thousands of residences, (on 5/31/23 measured inflow at 684 GPM) and pumps the wastewater to the Rotonda Wastewater Treatment Facility.
5. **LS#817 Bunker Road**, constructed in the 1980's (see exhibit #6) - (Relocate/Complete Replacement to CCU owned Property next to station) Station is located in an undersized easement. Access is difficult as the station is located behind residential properties and is surrounded by stormwater drainage swales. Station is heavily corroded and in disrepair. This station does not require a stationary generator. The lift station collects wastewater from approximately 234 residences and pumps the wastewater to the Rotonda Wastewater Treatment Facility.

RP-22 GENERAL: Each site will be accessed by a 16-foot-wide driveway for access of maintenance vehicles and to keep maintenance vehicles and equipment off of the roadway. Where this is not feasible permanent access/ingress easements will be obtained to allow an equivalent level of access. The primary vehicles entering the site will be for periodic maintenance of the lift station and surrounding grounds.

A Special Exemption Permit/Approval from the Charlotte County Community Development Department/Zoning Board is required for each lift station. The consultant selected shall be responsible to submit all required materials with the special exemption permit application for each lift station and obtain required approval from the county. Specifics of this special exemption permit can be found on the Community Development Department website.

In the response to this request for proposals, the Engineering Consulting Firm shall provide an explanation of how each task will be performed and shall identify the members of their staff that will be performing specific functions as the work progresses. The Engineering Consulting Firm must also identify any critical milestones in the process that must be met for the work to be completed within the required time period and shall cite experience with similar types of work, including references for each project cited.

The estimated Engineering Technical Services Budget for each lift station project is approximately \$150,000.

The anticipated Schedule to have Bid Documents prepared within 220 calendar days.
